What's new in QuantiSheet 1.0.2

Team copy, November 2026 · includes ClaimIT 0.2.2

AI Takeoff

- **Finds more.** Reads more door and window schedules, including ones with merged header cells, and finds more rooms, including shower and toilet stalls.
- **Rooms don't overlap.** Where two found rooms share floor, the shared part is given to one room, so no floor is counted twice.
- **Better floor area.** Gross floor area leaves out porches and other outside spaces, and is checked against the rooms.
- **You decide what counts.** AI items stay out of every total until you accept them. A separate "Pending review" subtotal shows what's waiting, and the bid check warns you if any are left before the bid goes out.
- **One Review Queue** (AI Takeoff > Review Queue), least sure first, with Accept, Deny and Undo.
- **Run it again safely.** A second run shows only new finds; anything already on the drawing is never counted twice.
- **AI marks look different** - dashed, with an "AI" badge - until you accept them. The quantity CSV has an Origin column.
- **Scale check.** Each sheet's scale gets a confidence score and a picture of the printed scale. A doubtful scale is held until you confirm it.
- **Zones.** AI > AI Takeoff Zones: draw **Only Here** (green) or **Leave Out** (red) boxes on a sheet; AI Takeoff keeps only what it finds inside the green boxes and nothing inside the red ones.
- **Your names.** Rename an AI item once (or move its pieces to your item) and the next AI Takeoff uses your name. Takeoff > Item Names Learned lists them.
- **Fire extinguishers** and other life-safety symbols are now looked for on the life safety and floor plans.

Fixing and checking takeoff

- **Reshape an outline.** Click an area or line with the Select tool: drag a corner to move it, drag the dot in the middle of a side to add a corner, Ctrl+click a corner to remove it. The quantity and label follow; Undo works.
- **Select several at once.** Drag a box on empty space, or Ctrl+click markups. The status bar shows their combined total. Right-click: **Move Selected to Item**, status, or **Delete** them together.
- **"AI, edited".** The Markups List has an **Origin** column: manual, AI not checked, AI accepted, or AI, edited (an AI outline a person reshaped).
- **Find missed counts.** Right-click a count > **Show Uncounted Copies** outlines copies of that symbol with no count mark in orange; **Count the Uncounted Copies** adds them. Works for counts made with Count Symbol in 1.0.2.
- **Report Missed, then search.** In the Review Queue, after reporting a missed item, box one copy on the drawing; the copies like it come in as dashed counts in review, out of the totals until you accept them.
- **Accept on the drawing.** Select a dashed AI markup (or several) and press **A** to accept or **D** to deny - or right-click.
- **Count library.** Right-click a count > **Add to the Count Library**; on the next job, Takeoff > **Try the Count Library** finds them (in review). With a shared price database the whole office shares one library.
- **Count by Label** shows every hit before counting, grouped by tag; untick the wrong ones. Wildcards: **P-#** finds P-1 to P-12, **WH-*** any WH- tag.

Updates

- This team copy checks once a day for a newer team build and tells you. Nothing installs until you click **Install now**, and the check sends no documents, names or IDs.
- Check any time with **Help > Check for Updates Now**; turn it off under **Help > Check for Updates Automatically**.

ClaimIT 0.2.2

- **Start page** and a one-step new claim; **rooms by size**, in feet and inches (12'6").
- **Odd-shaped rooms:** add an alcove or extra leg, or take a corner out for an L-shape. Floor, walls and perimeter follow the shape.
- **Line kits** that fill in quantities from the room, edits that apply as you type, **undo**, and **autosave**.
- **Before-you-send checklist**, a totals bar, and a **diary and payments** tab (a record only - ClaimIT never moves money).
- Exports: room measurements and payments now in the PDF, CSV and Excel files; long room names wrap instead of being cut off.
- A sent claim can't slip back to draft by accident - use **Start a supplement**.

Known item

- The floor under a built-in shower bench isn't counted, so such a room can measure a little short. It is flagged and kept in "Pending review", out of the totals, until you check it. (The floor beside a bench is now counted.)
